

Gemstone

Photo Editor

A new photo editor is on the prowl

The powerful image creator you've been waiting for is finally here. ACDSee Gemstone Photo Editor 12 has all the artistry and layered prowess you need to satisfy your photo editing desires, no matter how complex the composition. For maximum productivity, the MDI (Multi-Document Interface) layered editor allows you to carve your images into full spectrum splendor. Let sultry tone curves and spinning color wheels feed your imagination as you whip through Gemstone's non-destructive RAW image processor, ACDSee RAW, and layered graphic editor. With an intuitive design, and presets for everything from creating files to fine-tuning colors, the Gemstone Photo Editor will polish your design workflow.

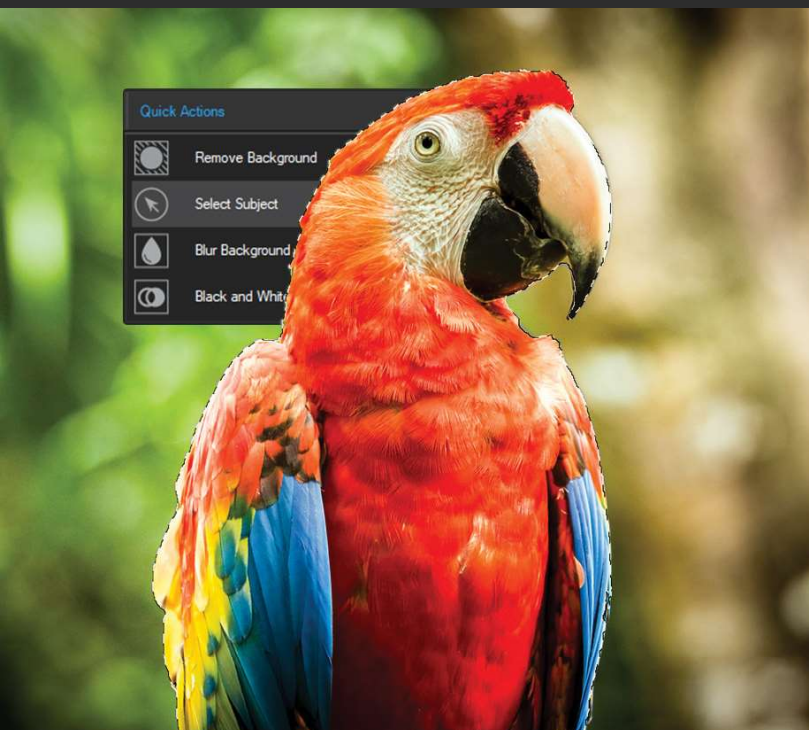

Limitless layered editing

Build the magical image compositions you've been dreaming of using Gemstone's GPU-accelerated layered editor.

Pixel perfect ACDSee RAW power

Flex your editing muscle using ACDSee RAW; a non-destructive RAW photo editor built right into Gemstone.

Artificial intelligence meets artistry

Let Gemstone's AI-powered selection tools do the heavy lifting so you can focus on the delicate details.

- Select your subjects with a click
- Quickly remove unwanted backgrounds in photos
- Blur image backgrounds with ease
- Instantly turn the background of your photo Black and White

Level up your productivity

You know what they say – two document tabs are better than one.

- Clean and uninhibited interface
- Open multiple files at the same time
- View or edit in a split view or child view
- Universal tool settings across document tabs

There's no place like Home Screen

Intuitive by design, the Gemstone Home Screen is set up to get you straight to work.

- Use pre-made templates for popular social media, print, and web specs – or create your own custom templates
- Easily open RAW image files for editing with ACDSee RAW
- Access previously opened files with a click
